**PRINT AUDIT 5**
Print Tracking & Auditing Software

Track All Printed Output

> Easy, enterprise-wide installation to any number of machines

> Tracks 100% of printing, including local, networked, USB and direct to IP connections

> Network push-install tool

> Bulletproof security that cannot be overridden

> Support for SQL or Access back-end accounting programs

> Client-based architecture for reduced impact on network resources

> No print server required

> Easy and secure configuration from any workstation

> Network integration with Windows NT, Active Directory and Novell Directory Services

> Free and unlimited technical support

Toshiba Document Solutions combine Toshiba e-STUDIO systems with powerful software applications and targeted business process improvements that enable you to more effectively distribute, manage, and organize your documents.

One of these software applications is Print Audit 5.

Flexible Output Device Management

Output costs can eat up overhead. Audits have shown that these costs can consume up to 15% of a company's total revenue. Print Audit 5 gives you the tools to identify and reduce those costs thus increasing your bottom line and allowing additional investment in revenue-generating expenditures.

Print Audit 5 is the most powerful and comprehensive print management and tracking solution in the world. It is comprised of three components: Analysis, Reduction and Recovery. These components can be purchased as a suite or individually to suit your needs. You only pay for the features you require.

Analysis

Most companies underestimate their printing needs and expenses by as much as 50%. Print Audit 5 Analysis is the easy way to get an exact picture of your company's printing volume and expenses.
With Print Audit 5 Analysis, you can learn who is printing what, and on which devices. You can easily produce reports that can help you to identify equipment inefficiencies and bottlenecks, relocate printers to ensure that the most efficient devices are being used the most, and create an inventory of all printing devices—often discovering hardware that was not approved.

Print Audit 5 Analysis:

> Tracks printing silently behind the scenes

> Has a powerful volume analysis reporting tool

> Tracks printer port, color information, number of pages, number of copies, network user and more

> Installs silently to tens, hundreds or thousands of workstations

> Has automatic color and monochrome tracking

Reduction

Because they do not have a print management tool, most companies find that their printing costs are out of control. In a typical firm, these costs are the third highest expense after payroll and rent. Print Audit 5 Reduction reduces waste and abuse by increasing user awareness. The knowledge that all printing is being monitored means that the stack of pages remaining on printers at the end of each day will disappear, reducing document creation costs by up to 25%. Print Audit 5 Reduction has both soft and hard approaches available, allowing you to choose the method that best suits your corporate culture and timeline.

DOCUMENT SOLUTIONS

Print Audit 5 Reduction:

> Redirects print jobs from high-cost to low-cost printers

> Enforces printer limits with customizable pop-up messages to the user

> Disallows printing by user, device and color

> Forces duplex (two-sided) printing

> Controls color printing by limiting access

> Notifies users of print job costs before they print and suggests lower cost alternatives

Recovery

Up to 80% of recoverable printing costs are missed by enterprises that attempt to track and bill for printing and plotting using manual processes. Print Audit 5 Recovery has an ROI of 2 to 6 weeks when used for cost recovery. Print Audit 5 Recovery can export data into virtually all accounting systems, and seamlessly integrates with Copy Audit, Print Audit's copy tracking solution. Copy Audit automates every step of the charge-back process and never misses a billable document. Print Audit 5 Recovery can be a "found money" machine.

Print Audit 5 Recovery:

> Provides optional job code validation through a user-friendly pop-up window

> Allows for the use of PIN codes and declining balances for charging users

> Integrates directly with any accounting system

> Offers 5 customizable, user-defined fields for validation

> Works with all CAD systems

Capture Scan Data with eCopy

Print Audit 5 offers an optional eCopy Connector that allows the administrator to capture scan activity from the e-STUDIO multifunction device and place the data directly into the Print Audit 5 database. When used in conjunction with Copy Audit, it tracks copy data as well. Using eCopy and Print Audit 5 together enables you to track all of your print activity.

Print Audit 5 supports all 32-bit versions of Windows and Mac OS X 10.3.9 and above.

Call your Authorized Toshiba Dealer today for more information on how Print Audit 5 and other Toshiba Document Solutions can help you to to more effectively distribute, manage, and organize your documents.

Monitor Your Documents with Less Expense

Our solutions help you manage your document production systems and other devices by providing centralized controls and tools to track and report on their usage.

When coupled with Toshiba e-STUDIO devices, our Manage software solutions provide the following benefits:

> Track the usage and status of printers and other devices

> Establish print controls at the workstation to restrict output to specific devices

> Improve cost-to-print by reviewing usage reports and increasing user awareness of printing costs

> Monitor who is printing what on which devices
