

# iDriver

## Extends Print Functionality from AS/400 Systems to the Toshiba e-STUDIO Multifunction Device

- > Take advantage of e-STUDIO's robust printing, output, and finishing capabilities
- > Customize AS/400 forms and reports printing in a menu-based environment
- > No expensive reprogramming is required
- > Eliminates the expense and complexity of external components
- > Resides natively on the AS/400

### iDriver enables you to more effectively distribute, manage, and organize your documents

#### ➤ Improve business efficiency

Toshiba Document Solutions combine Toshiba e-STUDIO MFPs with powerful software applications and targeted business process improvements to enable businesses to more effectively distribute, manage, and organize documents. One of these software applications is iDriver from inFORM Decisions.

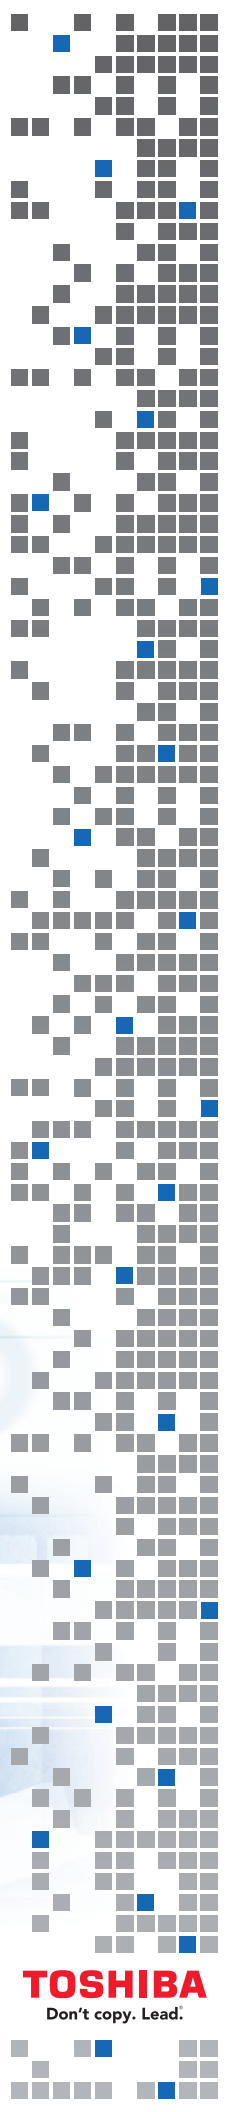

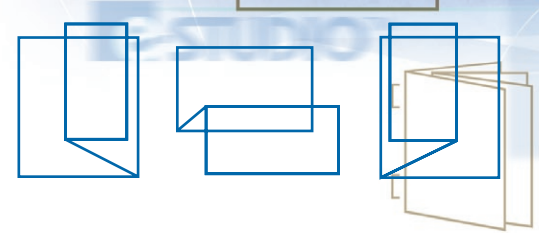

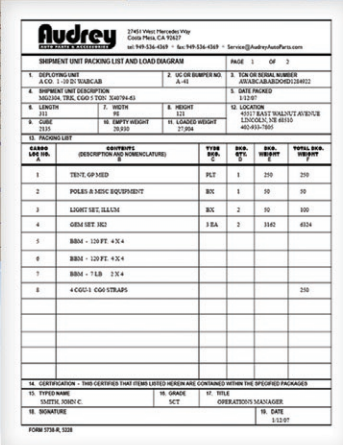

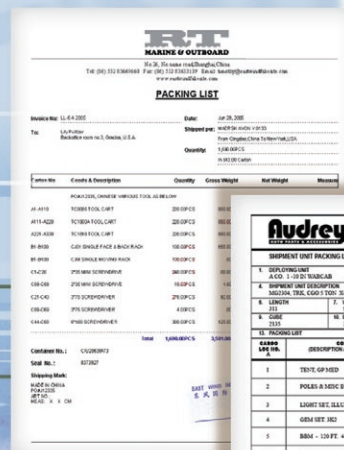

#### ➤ Save money and accomplish more

iDriver is a low-cost AS/400 (iSeries) native software printer driver add-on that seamlessly enables printing from an AS/400 directly to a Toshiba e-STUDIO MFP. Now, organizations with AS/400 environments can take advantage of Toshiba e-STUDIO's robust printing, output, and finishing capabilities including laser printing, output bin selection, hole punching, stapling, and more.

#### ➤ Dramatic results

Finally, your organization can say goodbye to bland business communications by leveraging:

- > Laser-quality presentations
- > Customized forms
- > Robust output
- > Finishing
- > Color

## > iDriver offers three methods of operation

To meet your organization's document application needs, iDriver offers the following operation modes:

- > **Manual Operation**  
Users select their AS/400 spool file (print output file), choose the desired finishing/output/formatting options, and send the print jobs to the e-STUDIO device.
- > **Automatic Operation**  
This method utilizes an automated server to capture spool files with user-defined attributes and applies user-predefined finishing/formatting options to the spooled files that meet the specific criteria.
- > **Immediate Operation**  
A programmer can embed a call to the iDriver application programming interface (API) program that adds the finishing options to the spooled file without user intervention. This method eliminates the automated server that would normally run in the background.

## Give your AS/400 system full e-STUDIO functionality

### > Customize your output in a menu-based environment

With iDriver, your organization can leverage the full functionality of e-STUDIO devices, with laser printing capability and finishing options combined with report formatting, font selection, and data remapping tools. This allows AS/400 forms and reports to be customized in a variety of ways in a familiar, menu-based environment and with no reprogramming required. Users can easily format and output AS/400 forms and reports by selecting portions of their spooled file, assigning multiple font selections, and then remapping their print output to desired locations on a page.

### > Higher speed, better control

Because iDriver is native to the AS/400, data does not need to be downloaded or exported to external print servers—which speeds up the print process and allows print managers to maintain control of data. And for added convenience, iDriver is easily downloaded and upgraded via the Internet.

## System Requirements & Specifications

<b>Operating System</b>	IBM OS/400, Version 4, Release 4 (v4r4)
<b>Storage</b>	313 MB of free hard disk space
<b>Network</b>	TCP/IP connectivity

Call your Authorized Toshiba Dealer today for more information on how **iDriver** and other Toshiba Document Solutions can help your organization.

## Distribute

## Effective Documents, Properly Distributed for Less Cost

Our Solutions enable you to distribute documents more efficiently and with less expense by addressing how you create and format your documents, output them to their destination, and present them in their final form.

When coupled with Toshiba e-STUDIO devices, Toshiba's Distribute software provides the following benefits:

- > Increase the speed and impact of business communications
- > Customize and control print job processing
- > Improve workflow and maximize print throughput
- > Flexible document management and output
- > Design, create, and deliver electronic documents, forms, and reports
- > Enable printing and finishing features on Toshiba e-STUDIO devices
